

OMKAR MISHRA

omkarmishra2004@gmail.com ♦ +91 9311314949 ♦ github.com/IoNiCx1 ♦ LinkedIn

SUMMARY

Computer Science graduate with an AI specialization and strong Python programming skills. Experienced in building web applications using Django, SQL, JavaScript, and REST APIs, alongside machine learning and systems programming projects. Passionate about backend development, clean software design, and solving real-world problems.

EDUCATION

Chandigarh University

B.Tech Computer Science — AI Specialization

Mohali, Punjab

2022 – 2026

Kendriya Vidyalaya, JNU

Senior Secondary — Science Stream

New Delhi, Delhi

2021 – 2022

CERTIFICATIONS

Django for Everybody — Specialization

University of Michigan · Coursera

Coursera

Dec 2024

- Completed a four-course specialization covering Django, SQL, JavaScript, jQuery, and JSON web services.

Project Planning and Machine Learning

University of Colorado Boulder · Coursera

Coursera

Apr 2025

- Learned project planning, machine learning workflows, and model evaluation techniques.

PROJECTS

Nexa — Compiled Programming Language

C++ · LLVM · Clang · CMake

github.com/IoNiCx1/nexa

2024

- Built a compiled programming language from scratch using LLVM with a custom lexer, parser, and static type checker.
- Designed ML-oriented language features including matrices, CSV handling, and neural network syntax.

Runx — Nexa Language Support (VS Code Extension)

TypeScript · VS Code API · Python

github.com/IoNiCx1/runx

2024

- Developed a VS Code extension providing execution support and syntax tooling for the Nexa language.
- Integrated a Python-based sentiment analysis pipeline using Logistic Regression and VADER.

Star Classification

Python · scikit-learn · Pandas

github.com/IoNiCx1/Star_classification

2024

- Built a multi-class classifier to categorize stars into six spectral classes using scikit-learn.
- Performed preprocessing, feature selection, and model evaluation using standard classification metrics.

Education Cost Prediction

Python · CatBoost · scikit-learn

github.com/IoNiCx1/ML

2024

- Built a CatBoost regression model to predict international education costs and exported it for reuse.

SKILLS

Languages: Python, C/C++, Java

Backend: Django, SQL, REST APIs, JSON

Frontend: HTML, CSS, JavaScript, jQuery

Machine Learning: scikit-learn, CatBoost, XGBoost, Pandas, NumPy, Matplotlib, NLTK, spaCy, TF-IDF, Logistic Regression, Naive Bayes, Classification, Regression, Feature Engineering

Tools: Git, GitHub, VS Code, Jupyter Notebook, Google Colab, LLVM, CMake
